

Is there a significant gender divergence in student substance use patterns?

Male vs. Female Students

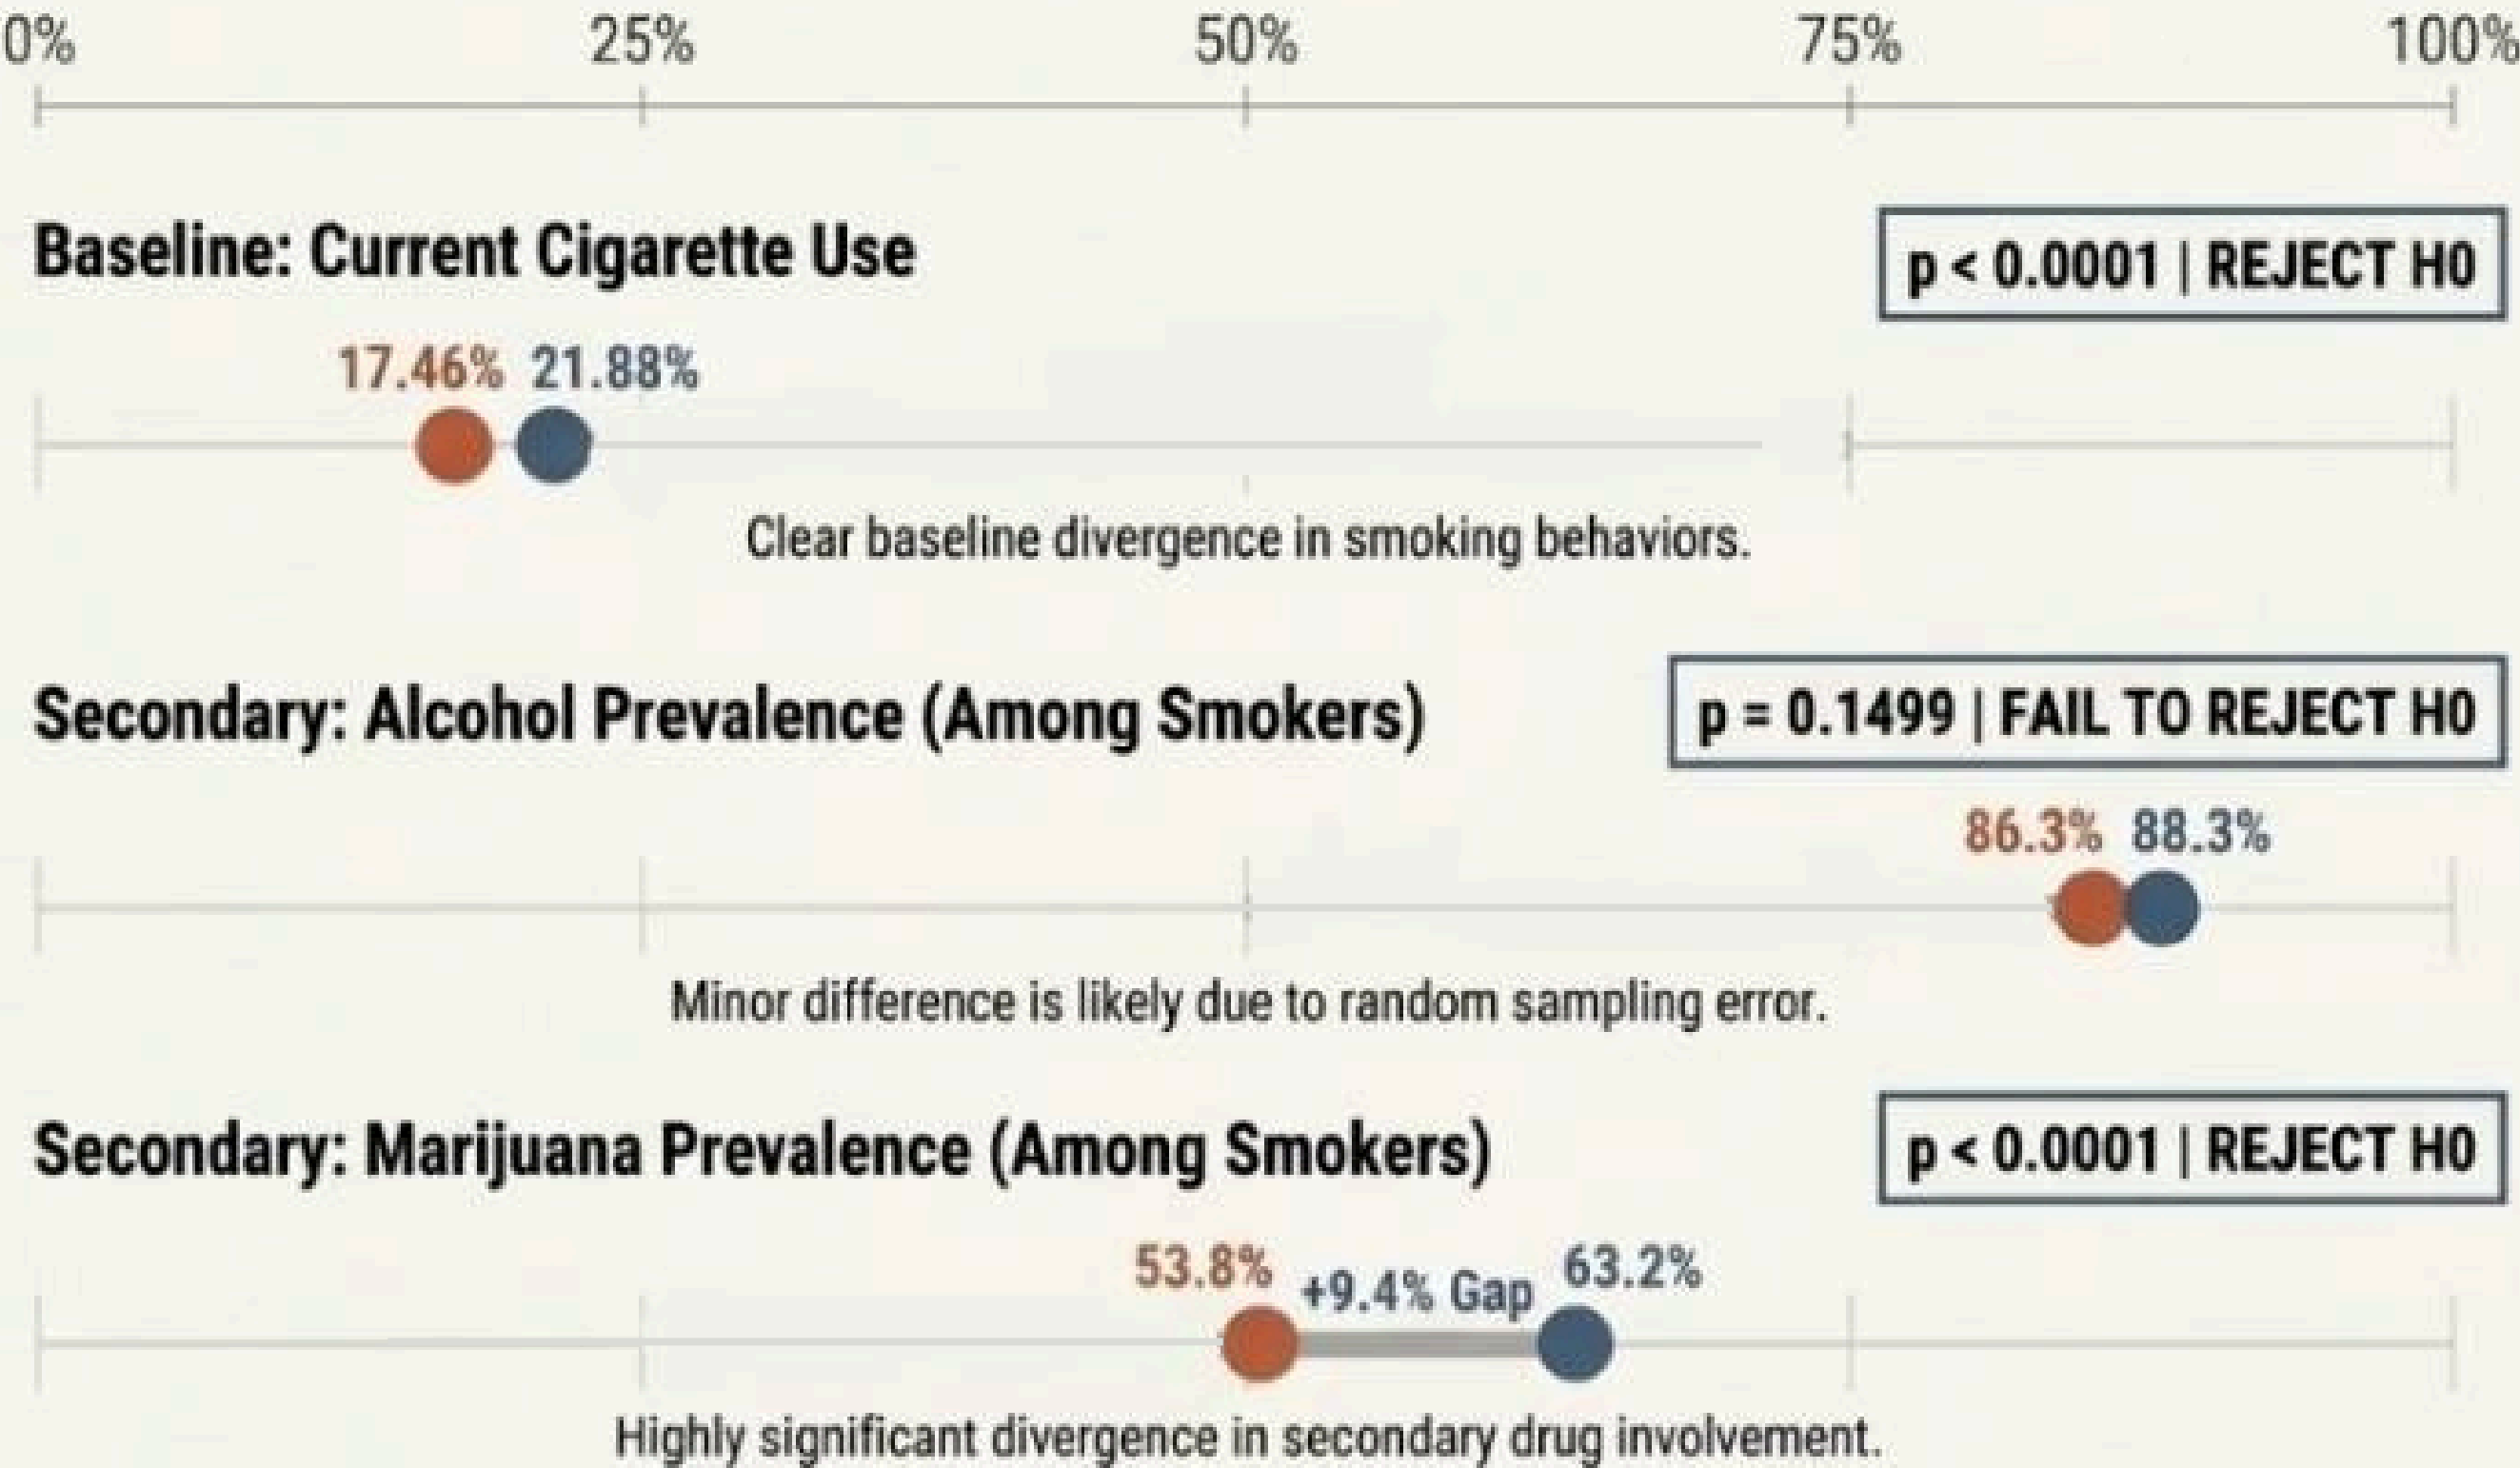

Response Variables

- 1. Current Cigarette Use (Overall Population)
- 2. Alcohol Prevalence (Among Smokers)
- 3. Marijuana Prevalence (Among Smokers)

Statistical Method

- Two-Proportion T-Test
- Null Hypothesis (H0): Male - Female = 0
- Significance level: 5%

Conclusion: Significant gender divergence exists in cigarette and marijuana use, but alcohol patterns remain consistent among smokers regardless of sex.
